Computer Analyst and advanced Computer Engineering student at Universidad de la República, with experience in development, maintenance, and testing of backend and web applications.

I have worked with technologies such as Java, Spring Boot, Angular, TypeScript, MongoDB, MySQL, PostgreSQL, REST/SOAP services, and automated testing tools. I am interested in building robust, maintainable solutions aligned with user needs, combining good development practices with strong learning ability and adaptability to new environments.

I also use generative AI tools to support code analysis, debugging, technical documentation, and learning new technologies.

SKILLS

Languages	Java, Python, C, C++, JavaScript, TypeScript, SQL
Backend	Spring Boot, Spring Framework, REST APIs, SOAP, Java EE, Servlets, JSP
Frontend	React, Angular, HTML5, CSS3, Tailwind CSS, Swing
Databases	MongoDB, MySQL, PostgreSQL
Testing and QA	Selenium, Cucumber, TDD, Postman
Tools	Git, Kafka, Tomcat, Vite
AI and Productivity	Applied use of generative AI tools to support software development, debugging, technical documentation, code analysis, and learning new technologies
Communication	Native Spanish, Advanced English

PROJECTS AND EXPERIENCES

Software Developer GEOCOM Uruguay 07/2022 — 01/2024

Participated in software development, maintenance, and testing across backend, web, and test automation projects.

- Maintained and evolved promotion subsystems for sales and finance applications, fixing bugs and implementing new features using Java 6 and SOAP services.
- Implemented automated tests for point-of-sale systems using Java 8 and Cucumber, helping validate critical business flows.
- Developed accounting and reporting microservices using Spring Framework, MongoDB, Kafka, and REST services, applying TDD practices.
- Developed and maintained frontend features with Angular and TypeScript integrated with backend services.
- Automated tests for an accounting website using Java, Spring Boot, Selenium, and Cucumber.

Databases 03/2025 — 07/2025

Designed and implemented relational database solutions. Worked with entity-relationship modeling, relational algebra, SQL, functional dependencies, normalization, transactions, concurrency, and recovery. Developed queries and analyzed schema integrity, efficiency, and consistency.

Computer Networks 08/2024 — 12/2024

Studied the theoretical and practical foundations of the TCP/IP model, including application, transport, network, and link layer protocols. Developed a lab project using Mininet, implementing a client-server application for traffic generation and routing/forwarding functionalities for an IP router within an emulated network.

Software Engineering Project 08/2023 — 12/2023

Continued and extended a system previously developed by another team. Added new features and developed an associated mobile application from scratch. This project involved understanding an existing codebase, adapting to previous architectural decisions, designing new functionality, and building user-oriented solutions.

Programming Workshop 07/2021 — 11/2021

Developed a Java application using Java SE 8 and Java EE. Implemented web functionality with Servlets, JSP, and Tomcat, along with an administrator interface developed in Swing. Worked under an incremental methodology, progressively adding new features.

C/C++ Projects

03/2021 — 11/2021

Developed applications in C and C++ focused on data structures, algorithms, object-oriented programming, design patterns, and large-scale programming concepts.

Bilingual CV Website

Personal Project

Developed a single-page personal website using React and Vite.

Implemented internal navigation with smooth scrolling, Spanish/English language switching, responsive design, and reusable components.

Used Tailwind CSS to build a modern interface with a gradient background, skills, experience, projects, and contact sections.

Console Scoundrel Game

Personal Project

Developed a console-based solitaire card game in Python.

Designed a modular architecture to separate game logic, card handling, rules, and console visualization.

Applied object-oriented programming concepts, data structures, and maintainable code organization.

EDUCATION

Computer Engineering, *Universidad de la República*

2018 - present
