Facundo Bacigalupi

Computer Analyst

LinkedIn: facundobacigalupi
GitHub: FacundoBacigalupi
Portfolio: github.io/cv-web

Computer Analyst and advanced Computer Engineering student at Universidad de la República, focused on backend development with Java and Spring. Experience with REST services, Kafka, MongoDB, and automated testing, plus full-stack personal projects with React and TypeScript. I am looking to join a team where I can work on real systems, understand existing codebases, and build clear, maintainable solutions.

Skills

Languages	Java, Python, JavaScript, TypeScript, SQL, C/C++
Backend	Spring Boot, Spring Framework, REST APIs, SOAP, Java EE, Servlets, JSP
Frontend	Angular, React, HTML, CSS, Tailwind CSS
Databases	PostgreSQL, MySQL, MongoDB, SQLite
Testing and QA	Selenium, Cucumber, JUnit, Postman, TDD
Tools	Git, Maven, Docker, Kafka, Tomcat
Communication	Native Spanish, Advanced English

Projects and Experiences

Software Developer — **GEOCOM Uruguay** — **07/2022 — 01/2024**

Participated in backend and web software development, maintenance, and testing. Worked on accounting and reporting projects using Spring Framework, MongoDB, Kafka, and REST services, and performed frontend maintenance with Angular and TypeScript. Implemented automated tests with Selenium and Cucumber in those projects, and with Java 8 and Cucumber for point-of-sale systems, helping validate critical business flows.
Also maintained promotion subsystems for sales and finance applications, fixing bugs and adding features with Java 6 and SOAP services.

Software Engineering — **University Project**

Continued and extended a system previously developed by another team: new features and an associated mobile application built from scratch. The project involved understanding an existing codebase, adapting to previous architectural decisions, and designing user-oriented solutions.

Programming — **University Projects**

Programming Workshop: Java SE 8 and Java EE application with Servlets, JSP, and Tomcat, plus a Swing administrator interface, built with an incremental methodology.
C/C++: applications focused on data structures, algorithms, object-oriented programming, and design patterns.

Databases, Networks and Security — **University Projects**

Databases: relational database design with entity-relationship modeling, relational algebra, SQL, normalization, transactions, and recovery.
Networks: Mininet lab implementing a client-server application and IP router routing/forwarding functionality in an emulated network.
Information Security: labs on man-in-the-middle attacks, cryptography with GPG and OpenSSL, password cracking and privilege escalation, firewalls with iptables, VPNs with OpenVPN, and OWASP WebGoat.

CipherChat — **Personal Project**

Educational prototype of an end-to-end encrypted messaging application. Developed with Spring Boot, React, TypeScript, PostgreSQL, JWT, and WebSocket/STOMP. It implements authentication, direct chats, multiple devices per user, and message encryption per device, with keys generated in the browser.

HomeCinema — **Personal Project**

Personal application for organizing and playing multimedia content on a local network. Backend developed with Spring Boot, frontend with React/TypeScript, and SQLite database. Includes local library scanning, playback progress tracking, TMDb integration, and video playback through HLS generated with FFmpeg.

Mi Stock **Personal Project**

Mobile inventory application for Android built with Flutter. It lets users register products, manage stock, store photos, scan barcodes, and view stock movements. Uses SQLite, Riverpod, and Material 3, and includes an experimental offline visual search with TensorFlow Lite.

Rubik's Cube 3D **Personal Project**

3D game in Unity 6 with a neural solver. I implemented input mechanics, animations, and cube logic. I trained a neural network in Python (supervised learning), exported it to ONNX, and ran it in Unity, solving scrambles of up to 25 moves with a near-100% success rate.
